

UNDRALEU® ETL BEST PRACTICES AND CODE REVIEW TOOL

Gain Control of your ETL Code Quality

"The world of ETL has advanced technologically to the point that automated management of code is beginning to be a necessity. I recommend you look at Undraley® and their approach to managing the ETL environment."

Bill Inmon

Undraley is an enterprise-class ETL Code review tool for Informatica PowerCenter, Oracle Data Integrator and IBM DataStage platforms.

The hallmark of Undraley is ETL code benchmarking against best practices without changing processes or sacrificing agility and comprehensive ETL performance monitoring for IT management. Undraley®'s intuitive design and powerful reporting empowers stakeholders to monitor and gauge the quality of the code transparently.

"The self-service functionality of Undraley lets the ETL developers catch mistakes before submitting to the review team, resulting in fewer iterations with the review team. All in all, we are very pleased with Undraley"

Data Warehouse Manager, Health Care Cover Provider

"With the help of Undraley, we are able to focus on main development by leaving the code quality control to Undraley"

Data Warehouse Manager, Global Insurance Company

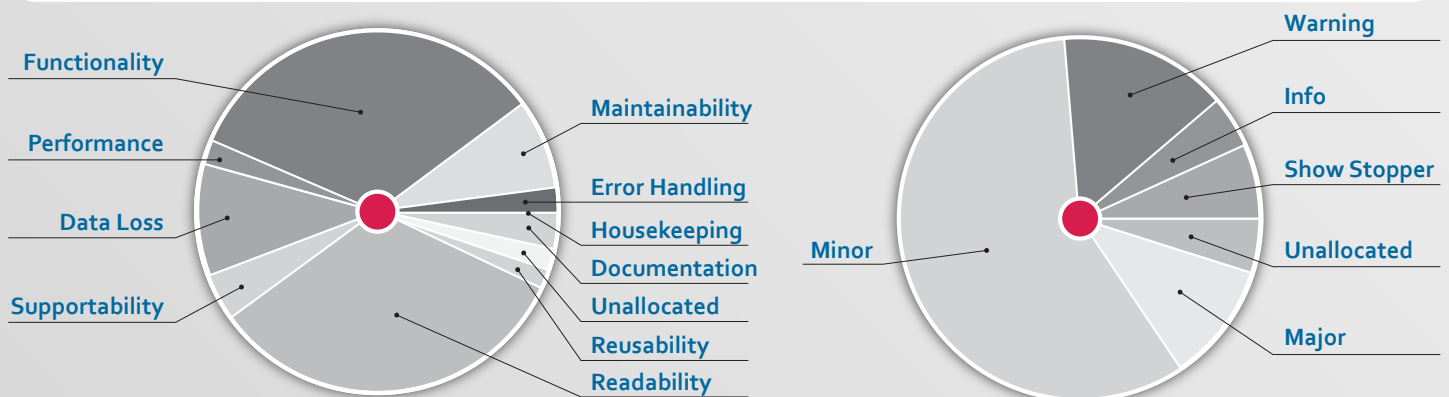

MAIN FEATURES:

• Best Practices:

Undraley comes with a rich and ever growing library of best-practiced rules of code writing that can be used as review requirements for the code quality.

Ready to use Library of best practices eliminates the necessity of excel or word maintained checklists. You can choose all or some of the rules to apply. At the moment the library covers all, but not limited to main review categories

It also allows adding more quality or severity classifications and assigning anomalies to each classification.

• Customization:

For companies that require stricter control on code quality, some standards can also be defined at a company level, which will thereon be inherited by all the projects.

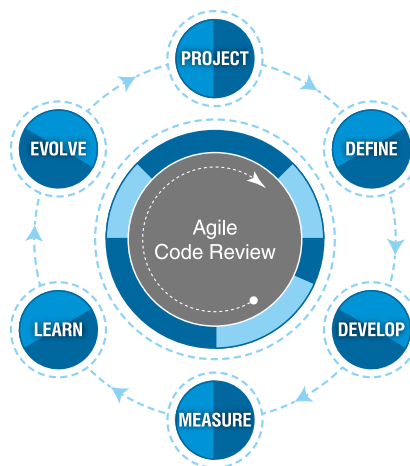

• Usability:

- Web-browser to access Undraley any time any place
- Reports presentation by Category with drill-down option
- Possibility to save and compare reports to perform trending analysis

- **Application:**

Undralegu is universal for application on different project stages.

- Apply Undralegu rules to define project standards
- Use Undralegu as a self-check instrument for developers to ensure the code is under defined standards
- Review the code while measuring the development results
- Analyze failures and capture improvements
- Refine your standards when evaluating project results

Undralegu provides a unique path towards consistent standards across the company thereby accelerating and facilitating governance of the ETL systems.

- **Embed Agility**

- Makes code review an agile, collaborative and productive experience

- **Quality Control Automation**

- Code reviews in an automated or self-service mode against selected best practices

- **Simplify**

- Undralegu is easy for anyone to use and be productive right away – be it developers, technical leads, project managers or DBA's

- **Better Decisions**

- Review Reports can be used as entry criteria for the change control board to approve a release/change request

- **Transparency**

- Undralegu helps you maintain strict control over your internal team, third party or outsourcing partners' code quality with complete transparency

- **Improve**

- Provides detailed insights into ETL code quality

- **Standardize**

- Enables standardization of ETL Code across your enterprise

- **Accelerate**

- Reduces Cost, Defect Density, Rework and your overall time-to-market

Undralegu is an easy-to-use tool that gives you full control over ETL processes, guarantees code conformity to high quality standards and improve your system performance on daily basis.
